

Interactive Prototype (Farmly)

Project Overview

Farmly is a mobile grocery delivery application designed to help users browse fresh products, view product details, and place orders easily.

This task focused on converting static UI screens into an interactive prototype using Figma.

The goal was to create a realistic user flow and demonstrate how users would interact with the application before development.

Objective

- Create navigation between screens
- Simulate user interactions
- Improve usability through visual feedback
- Build a clickable prototype

Screens Used

Splash Screen

Displays the Farmly branding and automatically redirects users to the home screen.

Product List Screen

Users can browse products, categories, and featured items.

Product Detail Screen

Displays complete information about the selected product including pricing, benefits, and product highlights.

Success State

Appears after the user adds a product to the cart and provides feedback that the action was completed successfully.

Product Detail Screen

Add To Cart

Success State

Interactions Implemented

Auto Navigation

- Splash Screen → Product List Screen

Product Selection

- Product Card → Product Detail Screen

Navigation

- Back Button → Return to Product List Screen

Add To Cart

- Displays Success State Overlay

Continue Shopping

- Returns user to browsing experience
-

Design Decisions

Consistent Visual Language

The prototype follows the same color palette, typography, spacing, and component styles established in the Farmly design system.

User Feedback

A success state was added after the Add To Cart action to provide clear confirmation and improve user confidence.

Simple Navigation

The flow was kept straightforward to reduce friction and make product discovery easier.

Tools Used

- Figma
 - Smart Animate
 - Prototype Mode
 - Auto Layout

Learning Outcome

This task helped me understand how interactive prototypes simulate real user behavior and how transitions, navigation, and feedback states contribute to a better user experience.
